ix Introduction to Part A: Geospatial InfoFusion and Video Analytics IV

PART A Geospatial InfoFusion and Video Analytics IV

VIDEO ANALYTICS

9089 02 Robust background modeling for enhancing object tracking in video [9089-1]
R. J. Wood, D. Reed, J. Lepanto, J. M. Irvine, Draper Lab. (United States)

9089 03 Tracking nautical objects in real-time via layered saliency detection [9089-2]
M. Dawkins, Z. Sun, A. Basharat, A. Perera, A. Hoogs, Kitware, Inc. (United States)

9089 04 Feature fusion and label propagation for textured object video segmentation [9089-3]
V. B. S. Prasath, R. Pelapur, K. Palaniappan, Univ. of Missouri-Columbia (United States);
G. Seetharaman, Air Force Research Lab. (United States)

9089 05 The effect of state dependent probability of detection in multitarget tracking applications [9089-4]
A. Gning, Univ. College London (United Kingdom); W. T. L. Teacy, Univ. of Southampton
(United Kingdom); R. V. Pelapur, H. AliAkbarpour, K. Palaniappan, Univ. of Missouri-
Columbia (United States); G. Seetharaman, Air Force Research Lab. (United States);
S. J. Julier, Univ. College London (United Kingdom)

9089 06 Vehicle change detection from aerial imagery using detection response maps [9089-5]
Z. H. Sun, M. Leotta, A. Hoogs, R. Blue, Kitware, Inc. (United States); R. Neuroth, J. Vasquez,
Air Force Research Lab. (United States); A. Perera, M. Turek, Kitware, Inc. (United States);
E. Blasch, Air Force Research Lab. (United States)

GEO-REGISTRATION AND UNCERTAINTY HANDLING IN GEOSPATIAL DATA

9089 09 Optimal full motion video registration with rigorous error propagation [9089-9]
J. Dolloff, B. Hottel, P. Doucette, H. Theiss, G. Jocher, National Geospatial-Intelligence
Agency (United States)

9089 0A Minimum Separation Vector Mapping (MSVM) [9089-10]
(United States)
**GEOSPATIAL INFORMATION APPLICATION NEEDS, CHALLENGES, AND ROADMAPS**

9089 0B  **Surveillance of ground vehicles for airport security** [9089-11]
E. Blasch, Air Force Research Lab. (United States); Z. Wang, D. Shen, Intelligent Fusion Technology, Inc. (United States); H. Ling, Temple Univ. (United States); G. Chen, Intelligent Fusion Technology, Inc. (United States)

9089 0C  **Summary of methods in Wide-Area Motion Imagery (WAMI)** [9089-12]
E. Blasch, G. Seetharaman, Air Force Research Lab. (United States); S. Suddarth, Transparent Sky (United States); K. Palaniappan, Univ. of Missouri-Columbia (United States); G. Chen, Intelligent Fusion Technology, Inc. (United States); H. Ling, Temple Univ. (United States); A. Basharat, Kitware, Inc. (United States)

**GEOSPATIAL DATA PROCESSING, EXPLOITATION, AND VISUALIZATION I**

9089 0D  **Automatic georeferencing of imagery from high-resolution, low-altitude, low-cost aerial platforms** [9089-13]
A. Geniviva, J. Faulring, C. Salvaggio, Rochester Institute of Technology (United States)

9089 0E  **A voxel-based approach for imaging voids in three-dimensional point clouds** [9089-14]
K. N. Salvaggio, C. Salvaggio, S. Hagstrom, Rochester Institute of Technology (United States)

9089 0F  **An automated data exploitation system for airborne sensors** [9089-15]
H.-W. Chen, M. McGurr, Booz Allen Hamilton Inc. (United States)

**GEOSPATIAL DATA PROCESSING EXPLOITATION, AND VISUALIZATION II**

9089 0H  **Blind restoration of aerial imagery degraded by spatially varying motion blur** [9089-17]
A. Punnappurath, A. N. Rajagopalan, Indian Institute of Technology Madras (India); G. Seetharaman, Air Force Research Lab. (United States)

9089 0I  **No-reference multiscale blur detection tool for content based image retrieval** [9089-18]
S. Ezekiel, R. Stocker, K. Harrity, Indiana Univ. of Pennsylvania (United States); M. Alford, D. Ferris, E. Blasch, M. Gorniak, Air Force Research Lab. (United States)

9089 0J  **Efficient feature extraction from wide-area motion imagery by MapReduce in Hadoop** [9089-19]
E. Cheng, L. Ma, A. Blaisse, Temple Univ. (United States); E. Blasch, C. Sheaff, Air Force Research Lab. (United States); G. Chen, Intelligent Fusion Technology, Inc. (United States); J. Wu, H. Ling, Temple Univ. (United States)

9089 0L  **Seismic data fusion anomaly detection** [9089-21]
K. Harrity, Indiana Univ. of Pennsylvania (United States); E. Blasch, M. Alford, Air Force Research Lab. (United States); S. Ezekiel, Indiana Univ. of Pennsylvania (United States); D. Ferris, Air Force Research Lab. (United States)
9089 0M Detection of potential mosquito breeding sites based on community sourced geotagged images [9089-22]
A. Agrawal, Indian Institute of Technology Bombay (India); U. Chaudhuri, Father Conceicao Rodrigues Institute of Technology (India); S. Chaudhuri, Indian Institute of Technology Bombay (India); G. Seetharaman, Air Force Research Lab. (United States)

9089 0N Wavelet-based polarimetry analysis [9089-23]
S. Ezekiel, K. Harrity, W. Farag, Indiana Univ. of Pennsylvania (United States); M. Alford, D. Ferris, E. Blasch, Air Force Research Lab. (United States)

PART B Motion Imagery for ISR and Situational Awareness II

9089 0O Computer vision-based technologies and commercial best practices for the advancement of the motion imagery tradecraft [9089-24]
M. Phipps, D. Capel, 2d3 Inc. (United States); J. Srinivasan, 2d3 Inc. (United Kingdom)

9089 0P Multimodal sensor experiment for evaluating motion imagery in activity-based intelligence [9089-25]
C. M. Lewis, Rochester Institute of Technology (United States) and Air Force Institute of Technology (United States); D. Messinger, B. Neuberger, Rochester Institute of Technology (United States)

9089 0Q Full-motion video analysis for improved gender classification [9089-27]
J. B. Flora, Old Dominion Univ. (United States); D. F. Lochtefeld, Air Force Research Lab. (United States); K. M. Iftekharuddin, Old Dominion Univ. (United States)

9089 0R Standardized rendering from IR surveillance motion imagery [9089-28]
F. J. Prokaski, IRID, Inc. (United States)

9089 0S Lambda Vision [9089-29]
M. Czajkowski, Lockheed Martin Corp. (United States)

9089 0U Statistical moments based methods for detecting sub-pixel target tracks in large image sequences [9089-31]
C. C. Borel, D. J. Bunker, Air Force Institute of Technology (United States); L. A. Mahoney, National Geospatial-Intelligence Agency (United States)

9089 0V Aerial video georegistration using terrain models from dense and coherent stereo matching [9089-32]
S. Ruano, G. Gallego, C. Cuevas, N. García, Univ. Politécnica de Madrid (Spain)

9089 0W Low-complexity multiplierless DCT approximations for low-power HEVC digital IP cores [9089-33]
S. C. Kulasekara, A. Madanayake, The Univ. of Akron (United States); R. J. Cintra, Univ. Federal de Pernambuco (Brazil); F. M. Bayer, Univ. Federal de Santa Maria (Brazil); U. Potluri, The Univ. of Akron (United States)

Author Index
Conference Committees

Symposium Chair
David A. Whelan, Boeing Defense, Space, and Security
(United States)

Symposium Co-chair
Nils R. Sandell Jr., Strategic Technology Office, DARPA (United States)

Part A Geospatial InfoFusion and Video Analytics IV

Conference Chairs
Matthew F. Pellechia, Exelis, Inc. (United States)
Kannappan Palaniappan, University of Missouri-Columbia
(United States)

Conference Co-chairs
Shiloh L. Dockstader, Exelis, Inc. (United States)
Peter J. Doucette, Integrity Applications, Inc. (United States)

Conference Program Committee
Selim Aksoy, Bilkent University (Turkey)
Erik P. Blasch, Air Force Research Laboratory (United States)
Bernard V. Brower, Exelis, Inc. (United States)
Filiz Bunyak, University of Missouri-Columbia (United States)
Brian J. Daniel, U.S. Naval Research Laboratory (United States)
Larry S. Davis, University of Maryland, College Park (United States)
Emmanuel Duflos, École Centrale de Lille (France)
Dan L. Edwards, National Geospatial-Intelligence Agency
(United States)
Paul Fieguth, University of Waterloo (Canada)
Robert D. Fiete, Exelis, Inc. (United States)
Michael E. Gangl, MacAulay-Brown, Inc. (United States)
Robert J. Gillen, University of Dayton Research Institute (United States)
Adel Hafliane, Ecole Nationale Supérieure d'Ingénieurs (France)
Anthony J. Hoogs, Kitware, Inc. (United States)
Yan Huang, University of North Texas (United States)
Simon J. Julier, University College London (United Kingdom)
Boris Kovalerchuk, Central Washington University (United States)
Dennis Motsko, National Geospatial-Intelligence Agency (United States)
Raghuveer M. Rao, U.S. Army Research Laboratory (United States)
John A. Richards, Sandia National Laboratories (United States)
Gunasekaran Seetharaman, Air Force Research Laboratory (United States)
Philippe M. Vanheeghe, École Centrale de Lille (France)
Darrell L. Young, Raytheon Intelligence & Information Systems (United States)
Karmon M. Vongsy, Air Force Research Laboratory (United States)

Session Chairs
1 Video Analytics
   Matthew F. Pellechia, Exelis, Inc. (United States)

2 Architecture for Multisensing Geospatial Collection
   Matthew F. Pellechia, Exelis, Inc. (United States)

3 Geo-registration and Uncertainty Handling in Geospatial Data
   Peter J. Doucette, Integrity Applications, Inc. (United States)

4 Geospatial Information Application Needs, Challenges, and Roadmaps
   Peter J. Doucette, Integrity Applications, Inc. (United States)

5 Geospatial Data Processing, Exploitation, and Visualization I
   Kannappan Palaniappan, University of Missouri-Columbia (United States)

6 Geospatial Data Processing Exploitation, and Visualization II
   Kannappan Palaniappan, University of Missouri-Columbia (United States)

Part B Motion Imagery for ISR and Situational Awareness II

Conference Chair
   Donnie Self, National Geospatial-Intelligence Agency (United States)

Conference Program Committee
   Tom Lash, SAIC (United States)
   Jeffrey Malapit, AMPS Strategies (United States)
   Gary Nadler, Consultant, Commercial Broadcast Industry (United States)
   Norman S. Stein, InTec, LLC (United States)
   Bernie H. Street, WiSC Enterprises (United States)
Introduction
Conference on Geospatial InfoFusion and Video Analytics IV

Geoinformatics is the science and the technology that develops and uses information science to address problems in the geosciences. A Geospatial Information System (GIS) describes any information system that collects, integrates, stores, edits, analyzes, shares, and displays geographic information. Geoinformatics and GIS are fundamental to today’s information networks and inherently encompass techniques that transform “raw bits and bytes” into “actionable information”, also termed InfoFusion. GIS applications incorporate tools that allow users to create interactive queries (user-created searches), analyze spatial information, edit data, maps, and present the results of all these operations. In the commercial sector, GIS is used in cartography, remote sensing, land surveying, utility management, geographical strategic natural resource planning, photogrammetric science, geography, urban planning, emergency management, navigation, and localized search engines. For example, defense and security applications, such as Unmanned Aerial Systems and Airport Security Systems, are rapidly transforming from basic sensor collection systems that “take pictures” to a fully capable GIS that incorporate multi-sensor collections, perform advanced processing and correlations in real-time, initiate sensor cross-cueing, and allow multiple users to instantly retrieve and disseminate information. Geoinformatics and GIS are critical to defense and security providers in order to enable satisfying emerging demands and rapid access to information for situational awareness, forensic back-tracking, and activity-based intelligence (ABI) mission sets.

These proceedings provide the SPIE community with a collection of perspectives, advancements, learning, and new solutions from a range of global industry, government and academic authors. The motivation of this conference track is simple: to expand the awareness of advanced architectures and enabling technologies that address emerging, dynamic, and complex security threats. Technical and scientific papers related to advancements in Video Analytics, Architectures for Multi-sensing Geospatial Collection, Data Processing Algorithms and Techniques, Information Dissemination, and Information Visualization Solutions that push beyond the scope of the state-of-the-art in industry are solicited.

We hope you find these proceedings useful in the advancement of GIS technologies.
