Volume 11865

Proceedings of SPIE 0277-786X, V. 11865

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

Target and Background Signatures VII, edited by Karin U. Stein, Ric Schleijpen, Proc. of SPIE
Vol. 11865, 1186501 · © 2021 SPIE · CCC code: 0277-786X/21/$21 · doi: 10.1117/12.2614925

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIEDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:
Author(s), "Title of Paper," in *Target and Background Signatures VII*, edited by Karin U. Stein, Ric Schleijpen, Proc. of SPIE 11865, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B … 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

PROPERTIES OF SCENE ELEMENTS

11865 04 **Spectral reflectance measurements of snow and snow covered objects: experimental studies compared with mathematical models (Invited Paper)** [11865-1]

11865 05 **Spectral properties of multilayered oak leaves and a camouflage net: experimental measurements and mathematical modelling** [11865-2]

11865 06 **A multi-temporal hyperspectral target detection experiment: evaluation of military setups** [11865-3]

FEATURES FOR DETECTION

11865 08 **Optical modeling and simulation of subpixel target infrared detection (Invited Paper)** [11865-5]

11865 09 **Perspectives and limitations of visible-thermal image pair synthesis via generative adversarial networks** [11865-6]

11865 0A **Compensation of geometrical distortion and inter-reflection effects in a BRDF imaging system** [11865-7]

11865 0B **Target detection from limited number of spectral bands using a signature-based machine learning** [11865-8]

OBSERVATION AND ASSESSMENT

11865 0C **The relation between visual search and visual conspicuity for moving targets** [11865-9]

11865 0D **Field observation, photosimulation and videosimulation of target detection in maritime environments: update** [11865-10]

11865 0E **Surveying for man-made objects in photographic images** [11865-20]

ADAPTIVE CAMOUFLAGE FOR THE SOLDIER

11865 0F **Overview of the adaptive camouflage for the soldier II (ACAMSII) (Invited Paper)** [11865-11]

11865 0G **Opto-electronic methods for adaptive camouflage** [11865-12]

11865 0H **Demonstrator of adaptive visual camouflage based on LEDs** [11865-13]

11865 0J **Prototype of adaptive, multispectral camouflage for the soldier** [11865-15]

ADAPTIVE SIGNATURES

11865 0K **Printed electronics based adaptive decoy (Invited Paper)** [11865-16]

11865 0L **Authentic colour replication in adaptive LED-camouflage panels** [11865-17]

POSTER SESSION

11865 0M **An investigation of various dehazing algorithms used on thermal infrared imagery for maritime surveillance systems** [11865-18]

11865 0N **A method for reducing the noise component for smooth monotonic signals and an algorithm for its application for prediction problems and detection of local stationary regions in images** [11865-19]
